

ARMORED LIQUID LEVEL GAUGES

Large Chamber Gauges Model RLC and TLC

ARCHON models RLC and TLC are designed to give a more accurate reading for liquids that have a tendency to surge or boil, than could be achieved with the standard gauges.

Here are some of the qualities that make ARCHON armored gauges superior to our competitors gauges:

- The liquid chamber is made from exceptionally heavy tubing 2" ID x 3-3/4"OD with a 7/8" wall thickness.
- The liquid chamber is recessed to hold each individual gauge glass and gasket snugly, eliminating any possible movement by internal pressure.
- The covers are fitted to the liquid chamber with stud bolts, making assembly or replacement of glasses and gaskets much easier and faster than with curved U-bolts and through bolts.

The covers are drop forged, machined to fit the contour of the glass and provides full support for the front cushion gasket. It is bolted to the face of the liquid chamber with the glass and gaskets in between.

Gaskets used are of the finest quality, uniform in thickness and accurately die-cut. Our standard gasket material is compressed non-asbestos, but can be interchanged with alternate material depending on the liquid being used.

Correction Factor Table-To be Applied to the 100% Ratings Listed Above

% of Rating	100%	75%	50%	25%
Chamber	Carbon Steel, 304SS and 316SS	Monel	Bronze	
Gasket Material Liquid Side	Teflon Lo-Flo, Non-Asbestos		Pure Teflon, Kel-F Shields	
Gasket Material Liquid & Cover Side	Non-Asbestos		Teflon Lo-Flo	Pure Teflon
Optional Features	Non-Frost Extensions (Max. Temp. 100°F)			

ARMORED LIQUID LEVEL GAUGES

We can furnish these gauges in single section sizes 1 through 9 or in multiple section type with one-piece liquid chamber for the entire length of the gauge.

The liquid chamber can be supplied in Steel or Stainless Steel to meet specific requirements.

REFLEX GAUGES - This gauge type is equipped with flat reflex glass comprised of reflecting prisms which cause the liquid inside to appear black in color. The space above appears silvery in direct contrast assuring a distinct reading of the liquid level.

TRANSPARENT GAUGES - This gauge type is equipped with two flat plain glass sections; one on either side of the liquid chamber. This allows light to pass through the gauge permitting clear observation of liquid level, color and clarity.

Plastic or MICA shields can be furnished when handling caustic substances, acids or media corrosive to glass.
